

INTERPRETATION

This is a nonbinding translation of the Regulation. If any question regarding the meaning and interpretation of the present regulation arises, the Portuguese Version should prevail.

**Curricular Units of the 1st cycle
Integrative Project (PIC1) Regulation****Article 1**
Scope

The 1st cycle Integrator Project (PIC1) Curricular Unit (CU) aims to integrate as many concepts acquired throughout the 1st cycle as possible in order to solve a real problem or challenge, individually or in a team, through a scientific project, technology or management.

Article 2
Accreditation

The PIC1 CU takes place at the end of the 1st cycle (5th or 6th semester), with a weight between 6 and 12 ECTS.

Article 3
PIC1 Curricular Unit format

There are 3 types of PIC1:

- a. **Scientific Project:** An in-depth, academically rigorous analysis of a scientific, technological, or business challenge.
- b. **Project in company:** project focused on a specific challenge presented by the host company that requires a solution or analysis aimed at a short-term implementation.
- c. **Project included in JUNO (CAPSTONE):** multidisciplinary team work based on real and complex problems/challenges presented by companies or institutions and which require contributions from students from various IST/ULisboa courses (see CAPSTONES Regulation).

The work can be carried out in research centres, in companies or in public or non-governmental institutions.

Article 4
PIC1 Curricular Unit functioning

1. PIC1 CU can be open in both semesters.
2. The topics are available in the student's FENIX platform.
3. The preparation of the work is guided in a tutorial manner by a doctorate (professor or researcher) from IST, or by an expert recognised as such by the scientific committee of the course, including doctoral students.

4. The supervision of the work can be done under a co-supervision regime. Whenever the advisor is external to IST, and in these cases the co-supervision must be ensured by a doctorate (professor or researcher) from IST is mandatory to be under co-supervision regime.
5. The work must be developed individually or in groups, as defined by the advisor.

Article 5

PIC1 Curricular Unit Coordination

1. The PIC1 project is published by the lead instructor of the CU or by the advisor, preferably on the FENIX page, indicating that it is a PIC1. Projects are made available on the Fénix platform, preferably during the first period of the previous semester, so that students can submit their choices. The attribution of topics takes place, preferably, in the second period of the previous semester.
2. When submitting the topic, the advisor must confirm that all formalities have been completed with the transfer and technology office for this purpose.

Article 6

PIC1 Curricular Unit assessment

1. At the end of the project work, students must deliver the work report, which will be one of the objects of evaluation, until the beginning of the normal exam period.
2. After submission, the work must be presented and discussed in an oral evaluation until the time of appeal, where at least one IST advisor and one member must be present.
3. The assessment of student performance should take into account the various types of skills that are intended to be developed in students, and should focus on various components, such as:
 - a. Work report;
 - b. Presentation;
 - c. Discussion;
 - d. Continuous assessment throughout the semester.
4. The weights of the different evaluation components of the previous point must be defined at the beginning of the semester and must be made available to students, on the CU page.
5. The final grade is individual and will be assigned until the end of the appeal period.
